

NOMAD TOTAL COMMAND (NTC) v3.0

+ **Simple:** Easy to operate. Manage local and remote assets from any device

+ **Safe:** Deploy from outside the vehicle, incorporate infinite safety checks

+ **Smart:** Intelligent routing selects optimal networks

+ **Secure:** Custom user roles, complete admin visibility and control

POWERFUL, INTEGRATED COMMAND + CONTROL SOFTWARE

Now in its third full-version release, Nomad Total Command (NTC) brings ease-of-use and robust capabilities together into a software package that defines next-gen command and control.

Unmatched security, safety, and performance.

With multiple layers of authentication and authorization, NTC takes a security-first approach. Admins have control over user roles, visibility into systems and event data, and access to powerful analytics that drive accountability and quality decision making. The ability to deploy from outside the vehicle improves safety, and *Command Lock* ensures multiple operators cannot perform conflicting actions. All-new *Intelligent Routing* technology allows users to view the status and quality of available networks. The optimal connection can be selected manually, or automatically on-the-fly by NTC. These and other Nomad innovations ensure you're ready to answer the call without worry... When every minute matters.

Let's build something great together.
